

# GarmentHub — Factory ERP

User Manual · Enugu Fashion & Garment Hub

Version 1.0 · Web application

Welcome to **GarmentHub**, the management system for the Enugu Fashion & Garment Hub. It brings your whole factory — workers, attendance, production, inventory, sales and reports — into one place. This manual walks you through every screen, shows you what each looks like, and answers the questions people ask most.

## 1 · Getting started & logging in

GarmentHub runs in your web browser. Open the address your administrator gave you (for local use, that is usually `http://localhost:5173` ). You'll see the sign-in screen.

The sign-in screen. Use the two tabs to switch between “Sign in” and “Create account”.

## Creating your account

- 1 Click the **Create account** tab.
- 2 Enter your full name, email, and a password (at least 6 characters).
- 3 Click **Create account**, then sign in.

### The very first account becomes the Administrator

Whoever signs up first automatically gets full access. Everyone after that starts as an Office Admin until an administrator changes their role on the [Users & Roles](#) page.

### Forgotten where things are?

Your role decides which pages you can see — so your menu may be shorter than a colleague's. That's normal.

## 2 · Roles & who sees what

Every person has one role. The menu on the left automatically shows only the pages that role is allowed to use.

| Role                                           | Can access                                                                           |
|------------------------------------------------|--------------------------------------------------------------------------------------|
| <b>Administrator</b> / Factory Admin / Manager | Everything                                                                           |
| <b>Director</b>                                | Director's View only                                                                 |
| <b>Supervisor</b>                              | Production, Weekly Tracker                                                           |
| <b>Office Admin</b>                            | Workers, Attendance, Power Outage                                                    |
| <b>Storekeeper</b>                             | Raw Materials, Finished Products, Stock Movements, Suppliers, Power Outage, Bin Book |
| <b>Floor Assistant</b>                         | Weekly Tracker, Hourly Tracker                                                       |

### 3 · Finding your way around

A typical screen: the dark sidebar on the left, your name and role at the bottom, and the page content on the right.

- **Sidebar** — your menu. Group headings (Overview, Production, Inventory...) can be collapsed by clicking them.
- **Live shift indicator** — shows the current shift (Morning / Afternoon / Night) and a running clock, so you always know which shift you're recording for.
- **Your account** — bottom-left shows your name and role, with a **log-out** button.
- **On a phone** — tap the ☰ menu icon at the top to open the sidebar.

### 4 · The Dashboard

Your home screen. At a glance it shows four key numbers — **Total Workers**, **Today's Attendance**, **Active Production Orders**, and **Low Stock Materials** — plus charts for attendance trend and production by department, and a recent-activity feed.

#### It knows the time of day

The greeting and the shift line update with the current shift automatically.

## 5 • Workers

Your staff register. Each worker has a name, employee ID, role, department, team, shift, phone, hourly rate, status and hire date.

TOTAL WORKERS

42

ACTIVE

38

ON LEAVE

3

TERMINATED

1

| NAME           | EMP ID  | ROLE        | DEPT      | SHIFT   | STATUS     |
|----------------|---------|-------------|-----------|---------|------------|
| Adaeze Okeke   | EMP-001 | Operator    | Sewing    | Morning | Active     |
| Ifeanyi Okafor | EMP-006 | Technician  | Finishing | Night   | On leave   |
| Uchenna Madu   | EMP-010 | Floor Asst. | Packaging | Morning | Terminated |

The Workers register — KPI cards on top, searchable/filterable table with coloured status badges. Most list pages share this layout.

### Add a worker

- 1 Click **+ New Worker** (top-right).
- 2 Fill in the form. Name is required; the rest is optional.
- 3 Click **Save**.

Use the search box and the Status / Department / Role dropdowns to find people. Coloured badges show status: ● active, ● on leave, ● terminated.

#### Attendance needs workers first

You can only mark attendance for people who exist here. If the Workers list is empty, add staff (or import them) before using Attendance.

## 6 • Attendance

PRESENT 38 ABSENT 2 LATE 3 ON LEAVE 1

DATE: 2026-06-23

WORKER: Adaeze Okeke ✓ marked

SHIFT: Morning

CLOCK IN: 06:02

CLOCK OUT: 14:10

HOURS (AUTO): 8.1h +0.1 OT

Update attendance

Marking attendance: choose the date, search for the worker, set times — hours and overtime calculate themselves.

### How to mark attendance

- 1 Pick the **date** (defaults to today).
- 2 Type a name in the **Worker** search box and select the person. A green ✓ **marked** tick means they already have a record for that date.
- 3 The marking form appears. Choose shift, clock-in and clock-out times, and status.
- 4 **Hours worked** and **overtime** (anything over 8 hours) are calculated for you.
- 5 Click **Mark attendance** (or **Update attendance** if editing).

#### Already marked? It switches to edit.

If the worker already has a record for that date *and shift*, the form loads their existing entry so you can correct it instead of creating a duplicate.

#### No "Mark attendance" button?

The button only appears *after* you select a worker. If you can't select anyone, your Workers list is empty — add workers first.

## 7 • Production

Track production orders from cutting through packaging. Each order shows a progress bar (actual output ÷ target quantity) and a status: pending, in progress, completed or delayed. The four cards at the top summarise totals, completed, in-progress and delayed.

Production orders, each with a live progress bar (output ÷ target) and a status badge.

Filter by status, stage or shift; use the year and From/To date filters to narrow the list. Click the pencil to edit, the bin to delete.

## 8 • Weekly Tracker & PDF export

The Weekly Tracker: department tabs, a week you can step through, and a totals row at the bottom.

### Reading the grid

Each department has a tab (Sewing, Cutting, Finishing, Ironing, Packaging/QC). For the chosen week it lists every entry with target, day output, night output, total and an **efficiency** % (green = on/over target, amber/red = below). The bottom row totals the week.

### Moving between weeks & years

- Use the < > arrows to step one week back or forward.
- Pick a **year** from the dropdown — this jumps the view to the start of that year, then step forward with > to reach any week.

### Add / edit an entry

- 1 Click **+ New Entry**, choose the date, department, team/worker, product and the target/day/night numbers.
- 2 Save. To change or remove an entry, use the pencil / bin icons on its row.

#### Export to PDF

Click

#### Export PDF

to download a tidy landscape report of *all* entries for the selected year, grouped by month with monthly totals — ready to print or email.

## 9 • Hourly Tracker

For finer detail, log output hour-by-hour per worker: date, hour, shift, department, units produced and defects. Filter by date, shift or department. Useful for spotting which hours of the shift are most productive.

*Layout: the same card-and-table style shown for Workers above, with columns for date, hour, worker, units and defects.*

## 10 • Raw Materials & Finished Products

### Raw Materials

Your fabric and supplies store: fabric type, colour, GSM, cost, batch number, warehouse location, supplier, quantity, unit and reorder level. Rows at or below their reorder level are **highlighted**, and the cards count In Stock / Low Stock / Out of Stock.

TOTAL

5

IN STOCK

3

LOW STOCK

1

OUT OF STOCK

1

| FABRIC        | COLOUR | QTY | REORDER | SUPPLIER      | STATUS       |
|---------------|--------|-----|---------|---------------|--------------|
| Cotton Poplin | White  | 420 | 100     | Aba Textiles  | In stock     |
| Polyester     | Navy   | 80  | 100     | Lagos Fabrics | Low stock    |
| Denim         | Indigo | 0   | 50      | Kano Mills    | Out of stock |

Raw Materials — low-stock rows are highlighted amber so you can spot what needs reordering.

## Finished Products

Goods ready to sell: SKU, name, size, colour, design code, batch, cost & selling price, quantity available and category. Filter by category or size.

*Layout: the same card-and-table style shown for Workers, with columns for SKU, size, colour, category and price.*

### Good to know

Stock quantities change only when you edit a record. Logging a Stock Movement or a Sale does *not* automatically adjust these numbers in this version.

## 11 • Stock Movements

A running log of stock activity — stock in, stock out, adjustments, production use/output and sales. Record the item, type, quantity and a reference. Think of it as your inventory diary.

*Layout: the same card-and-table style as Workers, with a coloured badge for each movement type and a date column.*

## 12 • Bin Book

Tracks small consumables (thread, zips, elastic, needles...) across **Store A** and **Store B**. Two tabs:

| Items        | Entries  | + Log Issuance |           |         |
|--------------|----------|----------------|-----------|---------|
| ITEM         | CATEGORY | STORE          | CURRENT   | REORDER |
| White Thread | Thread   | Store A        | 145 rolls | 50      |
| Elastic 25mm | Elastic  | Store B        | 90 m      | 80      |
| Tailor Chalk | Chalk    | Store B        | 12 boxes  | 15      |

Bin Book — switch between Items and Entries tabs; issuing a consumable lowers its stock automatically.

- **Items** — the things you stock, with opening stock, current stock and reorder level. Low items are highlighted.
- **Entries** — daily issuances. When you log an issuance, the item's current stock **drops automatically**. Delete an issuance and the stock is **added back**.

### Log an issuance

- 1 On the **Entries** tab click **+ Log Issuance**.
- 2 Pick the item (it shows how much you currently have), set the quantity issued and who it went to.
- 3 Save — the new stock level is shown before you confirm.

## 13 • Sales / POS

Create customer invoices. Add line items (product, quantity, unit price) and the line totals, subtotal, discount, VAT and grand total calculate as you type. Track payment status and method.

### New Invoice

LINE ITEMS

|              |     |       |          |
|--------------|-----|-------|----------|
| Pinafore     | 200 | 3,900 | ₦780,000 |
| Oxford Shirt | 20  | 4,500 | ₦90,000  |

+ Add item

|               |                 |
|---------------|-----------------|
| Subtotal      | ₦870,000        |
| Discount (5%) | – ₦43,500       |
| VAT (7.5%)    | ₦61,988         |
| <b>Total</b>  | <b>₦888,488</b> |

Save invoice

The invoice editor: add line items on the left; subtotal, discount, VAT and total update live on the right. (Set VAT to 7.5% for Nigeria.)

- 1 Click **+ New Invoice**.
- 2 Enter the customer and order type (wholesale / retail).
- 3 Add line items with **+ Add item**; set discount % and VAT %.
- 4 Record amount paid, payment method and status, then **Save invoice**.

#### VAT note

The VAT field defaults to 16%. Nigeria's standard VAT is 7.5% — change the VAT % on each invoice (or ask your administrator to set the correct default).

## 14 • Customers & Suppliers

**Customers** — wholesale and retail buyers, with contact details, credit limit and lifetime totals. Filter by type.

**Suppliers** — who you buy materials from, with contact person, materials supplied, payment terms and a 1–5 star rating. Filter by status.

*Both use the same card-and-table layout as Workers; Suppliers shows a ★ star rating, Customers shows order and spend totals.*

## 15 • Finances

Record expenses by category (raw materials, labour, utilities, maintenance, transport, rent, equipment, other), amount, date, payment method and who approved it. The page shows total spend, a monthly expense chart and your top category.

Finances — total spend, top category and a month-by-month expense bar chart.

---

## 16 • Power Outage log

Record every power interruption. Enter the date, the time power went **off** and came **back** — the **duration** (e.g. "3h 33m") is worked out automatically. Cards show this month's outages, total hours lost and the longest outage. Filter by month and year.

OUTAGES — JUNE

3

HOURS LOST

9.8h

LONGEST OUTAGE

4.8h

DATE

2026-06-16

POWER OFF

13:20

POWER BACK

18:05

CALCULATED DURATION

4h 45m

The duration fills in automatically as you pick the off / back times.

Logging an outage: pick the date and the off / back times — the duration calculates itself.

---

## 17 • Reports & Director's View

**Reports** brings production, attendance and expenses together as charts. Choose a **Year**, or set a **From/To** date range (which overrides the year), to focus the analysis.

Reports: pick a year (or a From/To range) and the charts update — production trend, attendance rate, and expense breakdown.

**Director's View** is a read-only executive summary — production efficiency, attendance rate, orders completed, power hours lost, efficiency by department, top-performing teams and a team league table. Available to Directors and administrators.

---

## 18 · Import Center (CSV)

The Import Center (administrators only): one card per data type. Download a template, fill it in, upload it.

The Import Center (admin only) lets you bulk-add records from a spreadsheet.

- 1 Find the card for the data you want (Workers, Attendance, Power Outage, etc.).
- 2 Click **Template** to download a blank CSV with the exact column headings.
- 3 Fill it in (in Excel / Google Sheets) and save as CSV — **keep the headings exactly as they are**.
- 4 Click **Upload CSV** and choose your file. A progress bar runs, then a summary shows.

The summary reports four numbers: **Found**, **Imported**, **Duplicates** (ignored) and **Skipped** (rows with errors, each listed with its line number).

### Safe to re-upload

Duplicates are detected and ignored, so uploading the same file twice won't double your data. For example, a Worker is a duplicate if its `employee_id` already exists; an invoice by `invoice_number` ; attendance by worker + date + shift.

---

## 19 · Users & Roles

Administrators manage who can do what here. It lists every user with their email, join date and current role. Use the dropdown to change someone's role; a guide at the bottom shows exactly which pages each role can see.

| USER           | EMAIL            | CURRENT ROLE  | CHANGE ROLE     |
|----------------|------------------|---------------|-----------------|
| Jane Doe (you) | jane@factory.ng  | Administrator | Administrator ▾ |
| Emeka Obi      | emeka@factory.ng | Supervisor    | Supervisor ▾    |
| Ngozi Eze      | ngozi@factory.ng | Office Admin  | Office Admin ▾  |

Users & Roles: change anyone's role from the dropdown. Your own row is locked so you can't lock yourself out.

### Two safeguards

You can't change your own role (so you can't accidentally lock yourself out), and only administrators can change roles.

## 20 · Everyday workflows

### Start-of-day (Office Admin)

- 1 Open **Attendance**, confirm today's date.
- 2 Search each worker as they clock in; set times and status; save.
- 3 Check the Present / Absent / Late cards match the floor.

### End-of-week production review (Supervisor)

- 1 Open **Weekly Tracker**, make sure each department's entries are in for the week.
- 2 Check the efficiency column and week totals.
- 3 Click **Export PDF** for the records or a management meeting.

### Receiving fabric (Storekeeper)

- 1 Add or update the fabric in **Raw Materials** (quantity, batch, supplier).
- 2 Log a **Stock Movement** of type *stock in* as your paper trail.

### Selling to a customer (Sales)

- 1 **Sales / POS → + New Invoice**; add the customer and line items.
- 2 Set discount and the correct VAT %; record the payment.

---

## 21 · Frequently asked questions

I forgot my password — what do I do?

Why can't I see some menu items my colleague has?

There's no "Mark attendance" button.

I marked the same worker twice by mistake.

My imported records appear in a strange order.

I uploaded a CSV but some rows were skipped.

Can I re-upload the same spreadsheet without doubling my data?

Why didn't my stock go down after a sale?

The VAT looks too high.

How do I filter to a specific period?

How do I export a report to share?

Does it work on a phone?

Is my data saved automatically?
